StratoQ

> Remove the need for print servers and manage your print infrastructure from the cloud.

Transfer your print infrastructure to the cloud
StratoQ is a hosted print management system, which allows you to print, scan and manage users from the cloud. This removes the need for on-premise print servers, offering you a flexible and expandable print infrastructure.

TOGETHER INFORMATION

## Print, scan and manage in the cloud with StratoQ

Runs on your device
StratoQ runs as an embedded app on your MFP, just like an app on your phone. So, there are no print servers required.

No more long passwords
Whether you're tapping your card, using a mobile app or entering a PIN, StratoQ will immediately log the user into the device, so they can access their print queue and scan to their email without the need for complicated passwords.

Print on demand
With StratoQ you print to one global virtual queue and release your jobs right at the touch panel of the MFP. Users don't need to worry about which office they're in, which network they're on, or even know what an IP address is. As long as they have the StratoQ app and can find one of your print devices they're good-to-go.
